Couples HIV Counseling & Testing

CHTC services may be offered to any two or more persons in a sexual relationship or planning to have a sexual relationship who wish to be tested together:

- Individuals learn not only their own HIV status, but also the HIV status of their partner(s).
- Allows couples to prepare a risk-reduction plan based on the HIV status of both partners
- Partners hear information together, enhancing the likelihood of shared understanding
- Early diagnosis of HIV infection and linkage to care enables persons with HIV to start treatment sooner, which leads to better health outcomes and longer, healthier lives.
